

Safety First...it's the right thing to do!

July 2017

Your Vision for the Future

How many times have you been in the middle of a task when you realize you may have missed a step? Often times that step may be protecting the most important sense you have...your vision. Protecting your vision from work related impairment should be number one on your list every day.

Vision protection comes in many forms. It is not only important to use the proper type but it is even more important to know when to you should use it and how to use it. Did you know that removing your eye protection could be just as hazardous as not having any on at all? Incorrectly removing your eye protection can introduce foreign objects into your eyes from a simple movement such as taking off your hardhat or safety glasses. Don't let your eye protection become the avenue of your injury.

Never rub your eyes if you feel like there is something in your eye!

Remember, your family is counting on you!

Cleaning your face

1. Bend forward
2. Close your eyes and remove your eye protection
3. Gently brush away any debris that may be on your face or above your eyes
4. Put eye protection back on
5. Straighten up

DO NOT BRUSH YOUR EYES OR FACE WITH YOUR SLEEVE TO WIPE AWAY SWEAT!

See it, own it!
